Full Project Title Goes Here

by

Student Name 1 Student Name 2 Student Name 3

Supervisor: Prof. Supervisor's Name

Department of Mathematics
Kwame Nkrumah University of Science and Technology

January 21, 2026

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Background of the Study

Purpose of This Section

Introduce the general area of study and provide the context of the research.

- Briefly describe the real-world or academic problem.
- Introduce key concepts needed to understand the project.
- Avoid technical details at this stage.

Presentation Tip

Use clear bullet points. Each point should be understandable without further explanation.

Good Practice

Where possible, use figures, diagrams, or illustrations instead of long text.

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Problem Statement

What Is the Problem?

- Clearly state the specific problem being addressed.
- Explain what is missing or inadequate in existing studies.

Why Is It a Problem?

- Explain why the problem is important.
- Relate it to real-world applications or theory.

Presentation Tip

Do not read directly from the slides. Explain the problem in your own words.

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Objectives of the Study

General Objective

State the main aim of the project in one sentence.

Specific Objectives

1. Begin each objective with an action verb (e.g., develop, analyse, investigate).
2. Objectives should be achievable and measurable.
3. Avoid equations unless absolutely necessary.

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Methodology

- Describe the approach used to solve the problem.

Methodology

- Describe the approach used to solve the problem.
- Present models, algorithms, or analytical techniques.

Methodology

- Describe the approach used to solve the problem.
- Present models, algorithms, or analytical techniques.
- Explain assumptions clearly.

Mathematics Projects

Clearly define variables, parameters, and governing equations.

Referencing

Citation Style

Referencing in Beamer follows the same style as the main project report.

1. In-text citation: Fosu et al. (2020)
2. Parenthetical citation: (Appati et al., 2015)
3. Multiple sources: (Fosu et al., 2021; Appati et al., 2015)

Follow this link for more on referencing with Jabref

https://youtu.be/zzlXj93WgJQ

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References

Analysis and Results

- Present key results only (avoid overcrowding slides).

Important

Always interpret results - do not just display them.

Analysis and Results

- Present key results only (avoid overcrowding slides).
- Use tables and figures where possible.

Important

Always interpret results - do not just display them.

Analysis and Results

- Present key results only (avoid overcrowding slides).
- Use tables and figures where possible.
- Number equations for easy referencing.

Important

Always interpret results - do not just display them.

Some Tips

1. Working with Tables, Figures and Equations is the same for beamer.
2. Bullet your points: Each point should be powerful enough to explain itself.
3. If possible, use pictures to introduce the background.
4. Capture literature as part of the background.
5. Ensure proper spacing by using

   `\medskip, \bikskip, \vspace{2cm}, \qquad, \quad`

6. Colours could be used to highlight some equations

$$2 + \sin x = 2000 \qquad 2 + \sin x = 2000 \qquad 2 + \sin x = 2000 \tag{1}$$

Outline of Presentation

1 Background of the Study (Maximum 4 Slides)
2 Problem Statement (Maximum 2 Slides)
3 Objectives (Maximum 1 Slide)
4 Methodology (Maximum 8 Slides)
5 Analysis and Results (Maximum 8 Slides)
6 Conclusion and Recommendations (Maximum 3 Slides)
7 Selected References

Conclusion and Recommendations

Conclusion

Summarise the main findings and relate them to the objectives.

Recommendations

Suggest practical applications, improvements, or directions for future work.

Outline of Presentation

1. Background of the Study (Maximum 4 Slides)
2. Problem Statement (Maximum 2 Slides)
3. Objectives (Maximum 1 Slide)
4. Methodology (Maximum 8 Slides)
5. Analysis and Results (Maximum 8 Slides)
6. Conclusion and Recommendations (Maximum 3 Slides)
7. Selected References
